issue

World-wide Coverage Industry-wide Scope

Service offers access to oil field equipment market

Direct access to oil field equipment worldwide is provided by this service.

Via remote access computer system, this firm offers direct accessibility to listings of oil field equipment throughout the world. The only requirements are an ordinary telephone and a small computer terminal, which permits customers to take advantage of the service in their office, home, or even during travel.

One phone call gives you access to listings from supply companies, drilling contractors, equipment manufacturers, and other petroleum industry companies worldwide. To use the system, dial the designated number (a local number in more than 300 cities worldwide) and your terminal is connected to the computer, ready to use. Once you are signed on to the system, the computer takes you through the operations step by step in plain English. No special skills or computer training are required.

Houston, Texas 77069

Dear Sam:

Attached is a news release that appeared in the September 20, 1982 issue of the Oil & Gas Journal.

Thought you might be interested in seeing this release in case you missed it in the magazine.

Sincerely,

John Spears
